

Hydraulic Die-casting Machine (Standard) BD-V5 EX-S Series

Higher performance, economical and easy to use
Improved operation and productivity
Additional features included compared to other die-casting machines

Incorporates the latest microprocessor control system “SYSTEM 500” for greatly enhanced machine operability
Automatic toggle lubricating unit for greater reliability and durability
High performance, highly rigid frame
Hydraulic system designed with emphasis on energy conservation and high-cycle operation
Electro-magnetic flow control valve is standard for injection circuit (applies only to the 250-ton and larger models)
